Our MISSION is to develop healthcare leaders prepared to advance health equity and well-being in an urbanizing world.

We VALUE collaboration, community engagement, diversity, innovation, professionalism, health equity, and social justice.

We pursue our mission and values through education, research, and service to:

| Give students the knowledge, skills, and values needed to lead dynamic health systems. | Create knowledge needed to lead people and organizations providing health services. |
| Increase the diversity of health services leaders, with a special emphasis on individuals and groups historically underrepresented in graduate education. | Promote the public's health. |

Why Choose a UNC Charlotte MHA?

According to the U.S. Bureau of Labor Statistics (2017), medical and health services managers earned an average of $111,680, with those practicing in general medical and surgical hospitals earning significantly more. Trends point to rapid change confronting health care administrators who will operate in new and diverse health care delivery organizations.

Our grounding in the Department of Public Health Sciences prepares and positions our students to thrive in both clinical and population health settings.
